

Amendments to the Claims

Please amend the claims according to the following listing of the claims.

1. (Currently Amended) Control system for a motor vehicle with an output control for putting out an information item concerning the operation of the motor vehicle and with a functional control, separated in terms of space from the output control for the generation or supply of information concerning the operation of the motor vehicle, wherein the output control comprises an information memory for the storage of information concerning the operation of the motor vehicle, whereby the information concerning the operation of the motor vehicle is accessible from the information memory of the output control.
2. (Previously Presented) Control system according to claim 1, wherein the information concerning the operation of the motor vehicle is accessible from the information memory of the output control upon inquiry to put out the information concerning the operation of the motor vehicle.
3. (Previously Presented) Control system according to claim 1 further comprising a communication link for transmitting the information concerning the operation of the motor vehicle from a functional control to the output control independent of a request to put out information concerning the operation of the motor vehicle.
4. (Currently Amended) Control system according to claim 3, wherein the information concerning the operation of the motor vehicle is transmitted from the functional control to the output control responsive to a change concerning the operation of the motor vehicle by the functional control.
5. (Previously Presented) Control system according to claim 3 wherein the information concerning the operation of the motor vehicle is transmitted from the functional control to the output control after expiration of a selected time.
6. (Previously Presented) Control system according to claim 5, wherein by means of output control, one can monitor whether, within the selected time, the information concerning the operation of the motor vehicle was transmitted from the functional control to output control.

7. (Currently Amended) Control system according to claim 5, wherein the information concerning the operation of the motor vehicle out of the information memory cannot be put out by output control when the information concerning the operation of motor vehicle was not transmitted within one of the selected time and a time lapse from the functional control to output control, whereby the time lapse is longer than the selected time.

8. (Previously Presented) Control system according to claim 1 wherein the output control includes a display for the optical illustration of the information concerning the operation of the motor vehicle.

9. (Previously Presented) Control system according to claim 1, wherein the output control comprises an input device for the purpose of putting in a request for putting out and/or for optical illustration of the information concerning the operation of the motor vehicle.

10. (Previously Presented) Motor vehicle, including a control system according to claim 1.

11. (Currently Amended) Process for the control of a motor vehicle with an output control operable for putting out information concerning the operation of the motor vehicle and provided with a functional control separated in terms of space from the output control for the supply of the information concerning the operation of the motor vehicle, wherein the output control includes an information memory for storage of information concerning the operation of the motor vehicle, the process including means for reading out of the information memory the information concerning operation of the motor vehicle.

12. (Previously Presented) Process according to claim 11, wherein the information concerning the operation of the motor vehicle is transmitted by means of a communication link from the functional control to the output control, into the information memory.

13. (Previously Presented) Process according to claim 11, wherein the information concerning the operation of the motor vehicle is transmitted by means of a communication link independently of a request for putting out the information concerning the operation of the motor vehicle from the functional control to output control into the

information memory.

14. (Currently Amended) Process according to claim 13, wherein the information concerning the operation of the motor vehicle is transmitted from the functional control to the output control in the event of a change of the information concerning the operation of the motor vehicle to the functional control.

15. (Previously Presented) Process according to claim 13, wherein the information concerning the operation of the motor vehicle is transmitted from the functional control to the output control after expiration of a selected time.

16. (Currently Amended) Process according to claim 15, including monitoring within the selected time, whether the information concerning the operation of the motor vehicle, was transmitted from the functional control to the output control
